EVERGREENS

Prices are for Evergreens Securely Balled and Burlapped.

Can dig Evergreens, roots puddled at reduction in price.

Our Evergreens have all been three times x x x transplanted, having been grown with plenty of room for development. Have been properly sheared and pruned for producing compact, symmetrical specimens.

Evergreens selected and tagged by customers in the nursery field will be subject to a 10% additional charge to cover extra expense.

Height specified after variety indicates height tree should obtain at maturity.

We cannot assume responsibility for the successful transplanting of Evergreens, as weather conditions, method of handling and care govern results secured and are sold with the distinct understanding that if they arrive in good condition and are accepted, our responsibility ceases.

FIR, Abies

CONCOLOR, White Fir. 50-60 ft.

By far the most outstanding Fir, withstands severe winter and summer heat better than other Firs. The color runs from pale green to light blue. The leaves are long, soft, and pungent. It develops into a narrow pyramid shape, symmetrical form. When small, it has a tendency to grow rather irregularly, but assumes a symmetrical even growth as it grows older.

NEW HORIZONTAL EVERGREENS

The following junipers are natives of the Rocky Mountain region. These varieties were selected for their beauty, compactness and hardiness and have proven a great asset to us who find many needs for low growing ground covers.

EVERGREENS—Continued

JUNIPER ADMIRABILIS

Habit of growth is horizontal but it is so compact that it makes a solid mat of evergreen, covering the ground completely. Foliage bluish green. Grows 6 to 8 inches high. Spreads rapidly, yet retains its compactness. A very fine plant to use for covering graves, terraces or any place where a low beautiful covering is wanted.

7	15 to 18 inches.....	12.50	115.00

JUNIPER FILICINUS MINIMUS

This pretty little juniper is also a variety of the Rocky Mountains. It is one of the finest foliaged evergreens of the juniper family. Its short horizontal limbs covered with delicate small branchlets forming fern shaped branches makes it a gem for the rock garden or any other place that a slow growing prostrate evergreen is desired. Grows 4 to 6 inches high, spreads slowly and is very compact. Green foliage.

BLOCK OF GRAFTED JUNIPER

In order to get uniform habit of growth and color of foliage, we have selected some outstanding types of various forms and have reproduced by grafting. See following varieties for further description.

SCOPULORUM DECUMBENS ARGENTATUS (Grafted) 20-30 ft.

The remarkable characteristics of this tree will not display their beauty until it has attained a growth of six feet or more, displaying more beauty each year. It has shining silver-green foliage. Each year the new branches, while soft, grow downward and as the season goes on the branches stiffen and turn directly upward. As the tree develops it becomes a mass of well clothed horizontal branches with their tips perpendicular with the leader.
